If needed, additional data transformation could be orchestrated by Rivery in Athena, Snowflake, Redshift or Databricks before being pushed into the Amazon Q.

A complete data integration solution for Amazon Q

Rivery provides all of your data integration needs in a single platform: Fully managed ingestion from any structured or unstructured source, data preparation for LLM usage, orchestration, and DataOps. Everything works together in harmony, giving you easy data access and reliable integrations.

Why Rivery for Amazon Q?

Integrate any data source

Easily sync any data source to create effective AI apps based on your organization data.

Prep the data for LLM usage

Transform the data and feed Amazon Q with the ideal structure for its RAG workflows.

Trigger Amazon Q syncs

Use a Rivery kit to trigger an Amazon Q sync ensuring your AI apps run on the freshest data.

Ensure data security

Build your data flows securely using your own S3 file zones without exposing data to third-parties.

Rivery's tight integration with AWS enabled us to seamlessly run all of our data integrations using our AWS native settings, starting with the seamless transaction through AWS Marketplace.
